

Nonequilibrium physics with interdisciplinary applications (T) - Nonequilibrium

<i>Course</i>	Nonequilibrium physics with interdisciplinary applications (T)
<i>Course No.</i>	Nonequilibrium

Category	Type	Language	Teaching		Semester
			hours	CP	
Elective	Lecture with exercises	English	2+1	4	ST

Requirements for Participation:

Preparation: Statistical mechanics

Form of Testing and Examination: Oral examination or term paper

Length of Course: 1 semester

Aims of the Course: Acquaintance with basic concepts of nonequilibrium physics; ability to apply the basic methods for the investigation of nonequilibrium problems; application of physics-based models to interdisciplinary problems.

Contents of the Course:

Principles of nonequilibrium physics

Stochastic systems and their description (master equation, Fokker-Planck equation,...)

Analytical and numerical methods

Nonequilibrium phase transitions

Applications to traffic, pedestrian dynamics, economic systems, biology, pattern formation,...

Recommended Literature:
